

# Self Help Screen

## DESCRIPTION

This module will let the user browse products in a store and request an associate for help, only by using a simple touch screen that works with a Raspberry Pi 3. This will be mainly targeted to the users who do not use Android as their mobile operating system. A simple touch screen will be coupled with an RFID reader to allow fast authentication and a proximity sensor for user detection.

## SPECIFICATIONS

Raspberry Pi 3.2  
TFT Display 3.5"  
RFID card reader  
Proximity sensor
